Topical Essay

Note: This document covers Rose Pharmacy, Inc.

Oracle Payables Interface from JDA MMS Payables allows RPI to generate AP Invoices from JDA MMS to Oracle Accounts Payable.

Basic Business Needs

The Oracle Payables Interface will be able to address the following:

- Create AP Standard Invoices, Credit Memos/Debit Memos by Batch on the Oracle Payables Invoice Workbench at the end of day.
- Upload invoices after the AP Vendor Interface is executed

Major Features

- Upload JDA MMS AP invoice flatfiles with naming convention to temporary table into Oracle Payable tables by company, by supplier.
- Create Standard Invoices, Credit Memos against supplier account, ready for validation, posting and payment processing.

Business Rules

CHART OF ACCOUNTS STRUCTURE:

- Company
- Account Code
- Location
- Department
- Future Segment 1
- Future Segment 2

NOTES:

- Liability account will be derived from the Supplier Master file.
- Input VAT, EWT will be automatically computed by the system during invoice validation. Entry – Home Office
- Invoices uploaded will be by company, by supplier.

1. Trade Transactions - Importation of Trade Payable transactions with matched invoices in MMS to Oracle Payables are presented through an Invoice as well with a '**Validated**' and '**Accounted**' status.

a. VAT Invoice

Inventory	xxx	
Input VAT	xxx	
Accounts Payable – Trade		xxx
Withholding Tax		xxx

b. Non-VAT Invoice

Inventory	xxx	
Accounts Payable – Trade		xxx
Withholding Tax		xxx

Note:

- Control measure in the interface/oracle to ensure that all data uploaded from JDA are received in Oracle (completeness) and also prevent double uploading of data
- Only matched invoices in MMS will be uploaded in Oracle Payables.

2. Purchase Returns / Return To Vendor (RTV) – entered as a negative amount either a debit/credit memo.

a. Purchase returns/Return to vendor (RTV)

Accounts Payable – Trade	xxx	
EWT Payable	xxx	
Inventory		xxx
Input		xxx

Note:

- Status: Never Validated. Validation and posting will be done in Oracle.

3. Non-Trade Payables – will not be included in the interface, it will be processed manually in Oracle.

Assumptions

1. A separate program outside Oracle will extract the JDA MMS transactions to a flatfile
2. A separate program outside Oracle will transfer the AP Invoices flatfiles in a subdirectory in Oracle

Report Descriptions

AUDIT LOG REPORT

Filename: AP Invoice Interface

Processing Date: July-12-2012 12:00:00

Number of records provided = 1000

Number of records uploaded = 1000

Total hash amount provided = 1,000,000.00

Total hash amount uploaded= 1,000,000.00

AP Invoice Interface Flatfile

No	Column Name	Description	Data Type	Req?
1	HDR_INVOICE_NUM	Header Invoice Number	VARCHAR2 (20)	Y
2	HDR_INVOICE_TYPE_LOOKUP_CODE	Header Invoice Type Lookup Code (Standard, Debit Memo, Credit Memo)	VARCHAR2 (20)	Y
