## Topical Essay

The AR customers are maintained in JDA MMS maintained by RPI. RPI will interface the customers from other applications to Oracle AR to avoid double maintenance.

The interface program will upload existing and new customers. Any customer updates initiated by JDA MMS will also be uploaded for update to Oracle AR.

---

## Basic Business Needs

The new customers will be interfaced to Oracle AR from JDA MMS at EOD or as defined by RPI. Any updates will also be uploaded at EOD or as defined by RPI.

---

## Major Features

1. Upload customer flatfiles with naming convention to temporary table to Oracle Tables.
2. Upload existing, new and updates of customer from JDA MMS to Oracle AR.
3. Upload customers site addresses and attach to company. Setup customers by branch. Customers by branch will be uploaded as the transaction occurs.
4. Upload customers contact details, tax details, terms and controls, CWT and FC rates and accounts and other customer information.

---

## Business Rules

1. All customer maintenance and updates will be uploaded from JDA MMS/
2. Pre requisite setups have been already setup in Oracle AR such as payment terms, tax codes, gl accounts
3. Run the interface program at EOD or as defined by RPI
4. Manual updating of uploaded customer masterf directly in Oracle is not allowed.
5. Run it before the AR Invoices Interface is executed

---

## Assumptions

1. A separate program outside Oracle will extract the customer to a textfile
2. A separate program outside Oracle will transfer the customer flatfiles to Oracle

**NOTE:**

When extracting data from other applications, there are two (2) criteria:

- 1) Existing and New customer data to be extracted.
- 2) Records of customer whose data has changed. (Updated customer records)

We do not need records of customers whose records have had no change.

Other systems may be having a status flag which can identify a new record or a changed record, or may have a field that indicates last changed date. Hence, filtering of required data can be done on this basis.

If the entire content of customer is given, processing could be slow as one will need to sequentially process each record of customer and update or add records in Oracle EBS R12.

---

## Report Descriptions

### AUDIT LOG REPORT

Filename: AR Customer Interface

Processing Date: July-12-2012 12:00:00

Number of records provided = 1000

Number of records uploaded = 1000

# Customer/Tenant Flatfile

## Field Descriptions

| No | Column Name                     | Description                                                                                                                                                                                                                                       | Data Type      | Req? |
|----|---------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------|------|
| 1  | ORIG_SYSTEM_CUSTOMER_REF        | Enter a value that uniquely identifies this customer in your original system. (Customer code)                                                                                                                                                     | VARCHAR2 (30)  | Y    |
| 2  | ORIG_SYSTEM_ADDRESS_REF         | Enter the value that represents the customer Bill-To address for which you are inserting or updating customer profile information. An active Bill-To business purpose must be associated with this address. (Customer location. In RPI is branch) | VARCHAR2 (30)  | Y    |
| 3  | CUSTOMER_NAME                   | Enter the name of your customer. (Customer name)                                                                                                                                                                                                  | VARCHAR2 (360) | Y    |
| 4  | ADDRESS1                        | Enter the address for your customer in these four columns. You can enter up to four lines of an address.                                                                                                                                          | VARCHAR2 (240) | Y    |
| 5  | ADDRESS2                        |                                                                                                                                                                                                                                                   | VARCHAR2 (240) | N    |
| 6  | ADDRESS3                        |                                                                                                                                                                                                                                                   | VARCHAR2 (240) | N    |
| 7  | ADDRESS4                        |                                                                                                                                                                                                                                                   | VARCHAR2 (240) | N    |
| 8  | CITY                            | Enter the city, country and postal code for this customer's address                                                                                                                                                                               | VARCHAR2 (60)  | N    |
| 9  | COUNTRY                         |                                                                                                                                                                                                                                                   | VARCHAR2 (60)  | Y    |
| 10 | POSTAL_CODE                     |                                                                                                                                                                                                                                                   | VARCHAR2 (60)  | N    |
| 11 | PROFILE_CLASS                   | Customer Classification.
