Functional Design

The MD050 document describes the functionality required to satisfy a specific business requirement and identifies the individual components that make up the customized report. Additionally, the MD050 document provides the details required to build and implement the customization.

This document will address the following:

- an overview of the business requirement and underlying business process the customization is intended to support;
- a description of required data entry forms and reports;
- a description of the business function the custom program must support; and
- a description of how the functionality is to be implemented.

Basic Business Needs

The customized report will be able to address the creation of a new program which generates a Collection Receipt form in accordance with the requirements set by RPI and also to comply to BIR Computerized Accounting System requirements.

Major Features

1. The template can be generated in PDF format.
2. The system must generate a Collection Receipt in 1 PDF file with three (3) pages per document number. Printed in each copy the labels Original Copy, Duplicate Copy and Triplicate Copy.
3. Re-printing of the receipt is allowed but generate only one (1) copy with watermark RE-PRINT, font style is CAMBRIA and size is 144.
4. The program shall stamp a date and time on every printed Collection Receipt. This date and time must be maintained in a DFF field **"Printed Date"** in the Receipt Header.
5. If the Receipt Document Number selected in the Document Number parameter has already a value indicated in the "Printed Date" DFF in the Receipt Header, then consider this as a reprinted copy of the Collection Receipt.
6. Only consider receipts with a DOC_SEQUENCE_ID of the Sequence Name tagged as a "Collection Receipt" in the Descriptive Flexfield (DFF) **"BIR CAS Form"** found in Document Sequence setup.

Business Rules and Conditions

1. The program shall only generate a Collection Receipt once Receipt is fully applied to Invoices regardless of its posting date. On-account application or Unapplied receipt must return an error result in the concurrent request. The program will also generate a log with details causing the error.
2. The value for Receipt Number shall auto-populate based on the Document Number generated upon saving. This will be implemented via Form Personalization.
3. Disable receipt information fields (DFF) below in the Receipt Header only if a Collection Receipt has a stamp date and time in the "Printed Date" DFF. This will be implemented via Form Personalization, but this will be subject for change in case the scenario is not possible for personalization or by any other means. The values must also auto-populate based on the parameters used in submitting the concurrent request.
 - a. Inflow Category
 - b. Bank
 - c. Check Number
 - d. Check Date

Functional Design

Report Overview

Report Name: **RPI Collection Receipt**
Report Title: **RPI Collection Receipt**

Report Parameter

The report requires the following Parameters:

- | | | |
|---|-----------------------|-------------------|
| 1. Document Number | [LOV] | (Required) |
| Only display document numbers under Collection Receipt document sequence that are already generated. | | |
| 2. Collector | [LOV] | (Required) |
| To only display the List of Values of Employees tagged as a Collector in the Employee setup DFF " BIR CAS CR Role ". Also display a default value for an employee tagged as "Yes" in the employee setup DFF " BIR CAS CR Default ". In case there are more than one (1) employee tagged as collector and set as default to YES, then this field shall be blank. | | |
| 3. Checker | [LOV] | (Required) |
| To only display the List of Values of Employees tagged as a Checker in the Employee setup DFF " BIR CAS CR Role ". Also display a default value for an employee tagged as "Yes" in the employee setup DFF " BIR CAS CR Default ". In case there are more than one (1) employee tagged as checker and set as default to YES, then this field shall be blank. | | |
| 4. Payment Mode | [LOV] | (Required) |
| Display the List of Values available and active. LOV is maintained in the RPI_BIR_CAS_CR_PAYMENT_MODE value set. | | |
| 5. Bank | [LOV] | |
| Dependent field to Payment Mode. Only enable and required if the Payment Mode is equal to "Check". LOV is maintained in the RPI_BANK_LIST_V3 value set. | | |
| 6. Check Number | [MANUAL INPUT] | |
| Dependent field to Payment Mode. Only enable and required if the Payment Mode is equal to "Check". | | |
| 7. Check Date | [DATE] | |
| Dependent field to Payment Mode. Only enable and required if the Payment Mode is equal to "Check". | | |
